

# SUNKIREDDY BARATH

 sunkireddybarath07@gmail.com    8438784178    Chennai, Tamil Nadu    Sunkireddy Barath    sunkireddy-Barath

## Education

**Bachelor of Engineering (B.E) – Computer Science and Engineering**, Chennai Institute of Technology 2024 – 2028  
• Cumulative Grade Point Average (CGPA): **8.8/10**

## Internship

- KaizenSpark Tech Pvt Ltd, *Full Stack Development*** Jun 2025 – Jul 2025  
Chennai, India
  - Full Stack Development Intern at KaizenSpark Tech Pvt. Ltd. contributed to building the company’s new official website using modern web technologies.
  - Collaborated with the team to deliver clean UI/ UX, optimized performance, and seamless multi-device user experience.
- NullClass EduTech Pvt Ltd, *Data Science Intern*** Nov 2025 – Feb 2026  
Krishnagiri, India
  - Data Science Intern at NullClass EduTech Pvt Ltd.; worked on developing an Emotion Detection system using machine learning and computer vision techniques
  - Contributed to building and training models to recognize human emotions from facial expressions, helping improve user behavior analysis, engagement, and intelligent decision-making.
- L2M Labs, *Software Development Intern*** Jan 2026 – Apr 2026  
Chennai, India
  - Software Development Intern at L2M Labs; developed Enrollix AI, a large-scale student registration platform for CIT Chennai with scalable backend architecture and automation to handle high user traffic efficiently.
  - Improved operational efficiency by reducing manual workload and streamlining registration processes, enabling better scalability and resource utilization for the institution.

## Open Source Contribution

- Wikimedia Foundation, *WikiEdu Dashboard***
- Contributed to the Wiki Education Foundation during the GSoC 2026 contribution period by improving the WikiEduDashboard platform through multiple frontend and internationalization fixes. Contributions included fixing image caption handling in GetRevisionPlaintext, resolving i18n deprecation warnings in user profile headers, improving image tooltip pluralization, removing hardcoded strings from embed\_stats\_button.jsx for better maintainability, and fixing the internationalized Edit button behavior in the Block component. Relevant contributions include [PR #6705](#), [PR #6752](#), [PR #6758](#), [PR #6754](#), and [PR #6786](#).
- FHIR Resource Tabular Viewer (Data for the Common Good)**
- Contributed to the FHIR Resource Tabular Viewer under Data for the Common Good by working on developer workflow setup and project configuration improvements. Relevant contribution: [PR #46](#) – Dev workflow setup (Under Review).

## Projects

- AgriSmart – Smart Farming with AI**, *React.js, Flask, Supabase, Python, NumPy, Pandas, Scikit-learn*
- AI-powered platform for crop recommendation, disease detection, weather insights, and multilingual voice support.
  - Plant disease detection API achieves 80–90% accuracy across common crop diseases.
  - Helps reduce 20–40% crop losses caused by pests, diseases, and climate factors.
- Lendora AI – Decentralized Lending and Borrowing AI**, *Full Stack, AI/ML, Blockchain*
- AI-driven platform automating borrower-lender negotiations with predictive risk analysis.
  - Generates optimized loan agreements using intelligent decision models.
  - Secured 1st place at Cardano Asia x IBW Hackathon 2025.
- Contexta – Autonomous AI Threat Intelligence Platform**, *Next.js, FastAPI, PostgreSQL*
- Multi-agent AI SOC platform for vulnerability analysis and attack path simulation.
  - Uses graph-based digital twin simulation with custom BWVS risk scoring.
  - Won 2nd Runner-Up at BeachHack National Hackathon 2026.
- NeuroCred – AI On-Chain Credit Passport**, *Solidity, FastAPI, Next.js, Web3, AI*
- AI-powered decentralized credit system evaluating wallet behavior for DeFi lending.
  - Stores credit scores as Soulbound NFTs for on-chain verification.
  - Won 1st place at QIE International Blockchain Hackathon 2026.
- PredicSure – Smart Urban Utility Outage Prediction System**, *React Native, Flask, Supabase, Python, Scikit-learn*
- AI/ ML platform predicting outages in electricity, water, and disaster management systems.
  - Uses time-series forecasting, anomaly detection, and real-time alert mechanisms.
  - Reduced response time by 1.8 seconds for faster alerts and decision-making.

## Skills

- Programming Languages:** C, C++, Python, Java, JavaScript, TypeScript, SQL, Ruby.
- Frontend and Design:** HTML, CSS, React.js, Next.js, Bootstrap, Canva, Figma.
- Backend and Database:** Node.js, Express.js, Flask, Ruby on Rails, MySQL, MongoDB, PostgreSQL, Supabase, Firebase.
- Artificial Intelligence and Machine Learning:** Numpy, Pandas, Scikit-learn, Matplotlib, TensorFlow, PyTorch.
- Computer Science Fundamentals:** Data Structures, Algorithms, Operating Systems, DBMS, OOPs, Machine Learning

## Competitive Programming

- LeetCode : (barath80)**, Top 13%, Solved 850+ problems, Max Rating 1702, Daily Streak 500+ days.
- CodeChef : (barath80)**, Div 4, Max Rating 1183, Solved 192+ problems, Bronze & Gold Badges, Contest Contender.
- CodeForces: (sunkireddybarath07)**, Max Rating 363 (Newbie), 6 Weeks on Platform, Enhancing Logic & Efficiency.

## Achievements

- CardanoHackathon Asia IBW Edition 2025 Winner**, Built Lendora AI – AI Financial Platform (3000+ teams, \$2000 Prize).
- BeachHack National Hackathon'26 2nd Runner-Up**, Built Contexta - Cyber Threat Intelligence Platform (₹20,000 Prize).
- QIE International Blockchain Hackathon'26 Winner**, NeuroCred- An On-Chain Credit Passport for DeFi (\$2500 USD Prize).
